About IMCS

The decision to create the International Mediterranean & Latin American Council of Simulation in order to establish a Modeling & Simulation reference, must be supported by rationale that justifies the institution of a Mediterranean network.

Our proposal is based on the current situation in the Mediterranean and takes into account feedback, indications as well as requests from the scientific simulation community. We consider it our duty to present the potential of simulation in this area and to promote the I-M-CS proposal. This initiative is motivated by the need to guarantee that an extended scientific community, such as the Mediterranean Cultural area (South Europe, South America, North Africa), could be properly represented and active at an international level. This will help to avoid any unbalanced clustering and concentration of the activities that extend over a much wider context into some restricted areas.

The role of Mediterranean Cultural Countries in the simulation research and development sector must be defined along with actions needed to ensure that the I-M-CS remains a permanent institution and not just a temporary initiative. In effect, modern computer simulation has been developed mainly in the Anglo-Saxon environment, and therefore we also want to contribute to the definition and development of modern M&S. Over the last ten years Mediterranean Simulation Excellence Centers have been developing innovative projects, acting as major contributors in the worldwide scenario. International events in these areas were a real success as they attracted the world community through the presentation of extensive and outstanding regional activities while proposing new developments. Based on such considerations, we want to overcome the vagueness of the current panorama, where everything is defined as useful and correct, while in reality no new projects or long-term strategies are focusing on our geographical areas. Our feeling is based on the awareness of our current expertise and cultural roots, in which sites, times and historical events are combined in a complex matrix worthy of further analysis: historical Mediterranean episodes are sometimes more famous for their cultural impact than the events themselves, and evidence has shown that simulation issues were being addressed even in the ancient past.

Brazil WAMS as a Big Success

- Over 60 Papers
- 4 INVITED GUESTS from Industry, Academia and Military
- Large Attendance
- Wonderful Organization
- Potential New Project Arising

The screenshot shows the WAMS 2010 website in a Windows Internet Explorer browser window. The URL is <http://evento.lamce.coppe.ufrj.br/wams.2010/>. The website features a blue header with the WAMS logo, the text "BUZIOS.2010", and the dates "5, 6 AND 7 MAY". Below the header is a navigation menu with links for HOME, CALL FOR PAPERS, SPECIAL TRACKS, SUBMISSION, PROGRAM, ORGANIZATION, and GALLERY. The main content area includes sections for GALLERIES WAMS 2010 (with sub-sections for Presentations, Cocktail, and Gala Dinner), PROCEEDINGS WAMS 2010 (with a link to download the proceedings), and CONFERENCE AIM. The conference aim text states: "The WAMS concentrates on modeling and simulation applications for high performance computer technologies to different topics. The audience includes users, vendors and scientist operating in applying innovative technology to modeling and simulation, once these areas are being used more widely as a way to prevent problems, to conduct situations and to help taking fast actions in extreme situations. Worldwide specialist will have the opportunity to participate and interact to this important International Forum on Logistics. The audience will include both users, vendors and scientists operating in applying advanced techniques to maritime sector. The Workshop evolved from AMS2004 (Rio de Janeiro) focusing on Application and Theory of Modeling & Simulation and the AMS2006 in Buzios." On the right side, there are sections for CONFERENCE DATES (May 05, 06 and 07, 2010), CONTACT (wams2010@lamce.coppe.ufrj.br), and social media links for Facebook and Twitter. A DOWNLOADS section lists: - Poster, - Electronic Folder, - Paper Template, and - Copyright Form.

Simulation Team: an Excellence Network in modelling and simulation

The Simulation Team was established in early third millennium for Leading a Pool of HiTech Institutions active in Modelling & Simulation. The Simulation Team represents an Excellence Network involving top quality international institutions.

Our structure is our strength!

The Simulation Team benefits from its structure, being able to support projects and initiative anywhere worldwide by direct involvement of high qualified representative based on local reference member and with the strong combined skills provided by

Simulation Team: wide range of innovative products and services

The Simulation Team offers a wide range of innovative products and services for markets including aerospace, communications, construction, defense, electronics, engineering, health care, logistics.

2011 Pending Proposal for Italy to be finalized on July 2010

Namibian-German Centre for Logistics A one stop shop for Logistics in Southern Africa

[Home](#) [Mission](#) [Services](#) [Infrastructure](#) [NGCL Blog](#) [Contact](#)

Welcome!

The NGCL aims at supporting the tasks and needs of the local transportation and logistics industry. It serves as a one-stop-shop for all logistics issues by offering:

- a Bachelor Honors programme in logistics to qualify future leaders
- consulting and technology transfer
- advanced training for professionals
- knowledge base and technology showcases
- research and networking, conferences and workshops

Check our [blog](#) to get an impression of our activities!
